

# Cochrane tools and systems

Trusted evidence.  
Informed decisions.  
Better health.

## Session outline

- Cochrane Review Ecosystem: an overview
- Essentials tools and systems ('must know')
- Other tools and systems ('good to know')

## Cochrane Review Ecosystem

Shows the communities, applications and data stores that support the process of conducting a Cochrane Review

## Essential tools and systems

- RevMan Web
- GRADEpro GDT
- Editorial Manager

## RevMan Web (RMW)

- Cochrane's cloud-based software for conducting all types of systematic reviews
- You can use RMW to:
  - Create and manage review projects
  - Generate meta-analyses and forest plots
  - Use the calculator tool to assist in data entry
  - Structure and store study data (inc. 'study-centric' data)
  - Collaborate on writing the review protocol and report
  - Access and use previous review versions
  - Organize your team's portfolio of reviews

## Accessing RevMan Web (RMW)

- Free access for Cochrane Review authors (with their Cochrane Account)
- Paid subscription for non-Cochrane reviews
- Practice reviews and templates available for new starters
- RMW Knowledge Base:  
<https://documentation.cochrane.org/revman-kb>

## GRADEpro GDT

- Software that compliments RevMan in creating ‘Summary of findings’ tables in Cochrane Reviews
- You can use GRADEpro GDT to:
  - Import data from RevMan
  - Perform calculations to present the key findings of your review
  - Conduct a GRADE assessment of the quality of evidence
- GRADEpro GDT is also used in guideline development
- Free access for Cochrane Review authors
- On a subscription basis for non-Cochrane reviews
- Available at [gradepro.org](http://gradepro.org)

# Editorial Manager

- Cochrane uses Editorial Manager (used by over 250 other publishers including Elsevier, PLOS and OUP) to manage author submissions of Cochrane Reviews
- Editors use Editorial Manager to conduct peer review and move accepted submissions to publication
- Information for authors available at:  
[links.cochrane.org/editorial-manager-for-authors](https://links.cochrane.org/editorial-manager-for-authors)

## Other tools and systems

- Covidence
- EPPI-Reviewer
- Other statistical packages
- Volunteer platforms:
  - Cochrane Engage
  - Cochrane Crowd

# Covidence and EPPI-Reviewer

- **Covidence** ([covidence.org](http://covidence.org)) – an online collaborative tool for:
  - uploading and sharing search results
  - screening and selecting studies
  - data collection
- **EPPI-Reviewer**
  - Especially appropriate for complex systematic reviews
  - Some advance features (e.g. text mining, automatic text translation, features for qualitative analysis)
  - A complement to RevMan for Cochrane Reviews
  - A stand-alone authoring tool for non-Cochrane reviews

## Other statistical packages

- Not part of Cochrane's offer of tools and systems for their authors
- May be useful for less-common analyses (meta-regression, network meta-analysis, diagnostic test accuracy reviews)
- R + add-on packages (e.g., metafor, stan)
  - Cost-free & open-source (R programming necessary)
- Stata ( $\pm$  free add-on commands)
  - Commercial, point and click (Stata programming optional & helpful)
  - Excellent support and documentation
- Comprehensive Meta-Analysis (CMA)
- WinBugs (for network meta-analysis)

## Volunteer platforms

- **Cochrane Engage** ([engage.cochrane.org](https://engage.cochrane.org))
  - Volunteering platform for evidence-based health care opportunities such as:
    - translating studies
    - providing consumer peer-review
    - mentoring
    - joining author teams
- **Cochrane Crowd** ([crowd.cochrane.org](https://crowd.cochrane.org))
  - a citizen science platform for categorising and summarising healthcare evidence (e.g. deciding whether a study is a randomised controlled trial or not)
  - includes pathways for learning about the key concepts in EBM

## Take home message

- Cochrane has a range of communities, applications and data stories to support the production of systematic reviews
- RevMan Web is Cochrane's main software for conducting systematic reviews, freely available for authors of Cochrane Reviews and available on a subscription basis for the production of non-Cochrane reviews
- Other tools and systems for production and editorial processing of Cochrane Reviews include GRADEpro GDT, Editorial Manager, Covidence, and EPPI-Reviewer
- Cochrane Crowd and Cochrane Engage are volunteer platforms supporting the work of Cochrane
